Burning Glass Technologies
Opportunities in Chicago's IT Landscape

One Lewis Wharf, Boston, MA 02210 | +1 (617) 227-4800 | www.burning-glass.com

Opportunities in Chicago's IT Landscape:

A Demand-Based Analysis

As part of the Job Driven (JD) National Emergency Grant (NEG), the Illinois Department of Commerce and Economic Opportunity, along with CompTIA, work to provide job-driven employment and training to dislocated workers, with a focus on the IT sector.

Purpose of this Analysis:

This analysis will provide an overview of the 7-county region's IT labor market. Through this document, counselors will be able to:

- Understand the overall IT landscape
- Provide career guidance based on prior experience in IT
- Provide career guidance based on areas of expertise
- Identify opportunities for placement and advancement, and the related training requirements

Distinguishing Features:

Burning Glass has used its dataset of online job postings to deliver career analyses at a far more detailed and granular level than possible with other sources:

- Job postings data allow us to identify distinct roles based on the particular skills they require, not just broad occupational categories.
- Skill and credential analyses are based specifically on what employers demand in each labor market.
- Career pathways are informed by real people's career transitions, included within Burning Glass' database of resumes.

Report Overview

This document will provide a framework for bringing individuals with and without an IT background into IT occupations. By providing a framework to understand career placement and advancement, identifying relevant local employers, and describing the skills and certifications required for a set of occupations, career counselors will be able to support clients in identifying appropriate training opportunities to land jobs.

The report is organized into three distinct sections:

Chicago IT Market Overview

• This section provides an overall picture of demand in the Chicago labor market and is separated according to barriers to entry in order to highlight opportunities that require little-to-no prior IT experience, moderate IT experience, and advanced training.

IT Occupation Profiles and Ladders

- This section provides an in-depth description of target IT occupations, including local demand by occupation, commonly requested skills, experience and education requirements, and the certifications and training that will support job placement.
- In addition to occupation profiles, this section will detail common career ladders and the associated skills, knowledge and certifications necessary for upward career transitions and lateral movements to new IT domains.
- The Chicago IT Market Overview includes additional roles that are IT-related but do not fit a standard career path and are therefore not highlighted as target occupations in this section.

IT Internships and Employers

• Especially valuable for employer outreach component of the project, this section will list the top employers hiring in the Chicago area for full time and internship opportunities.

Key Findings on the Chicago IT Market

- IT positions are numerous, and more heavily concentrated in the seven-county region of northeastern Illinois than across the country.
- There were nearly 10,000 job openings for new entries to the IT job market in 2014, including:
 - Help desk and support roles
 - Computer and IT sales, and recruitment roles
- Database roles are in high concentration in the Chicago area. Experienced IT professionals should consider adding training to shift to **data architect** and **data warehousing** roles.
- A robust knowledge of computer programming languages will strongly aid in transition between IT career pathways.
- Experienced web designers can expand opportunities by adding web development skills.
- Roughly **800 internship postings** were open in 2014. Employers with significant internship opportunity should be targeted for employer outreach.
- Network and cybersecurity positions are particularly reliant on IT certifications for employment and advancement.

Key Suggestions for Career Counselors

Positions are available for individuals at all levels of IT and other professional experience. Using the career ladders and occupation profiles within this document can aid in identifying job openings to match job-seekers' skill sets and career prospects.

Clients with limited overall experience can enter the IT job market through two possible tracks:

- With the addition of a baseline IT certificate like **A+ Technician** or **Network+**, job-seekers can access help desk and entry level computer support roles
- Computer sales openings at retailers such as Best Buy offer an alternative to credentialing while gaining entry level experience working with IT technology

Clients with prior experience outside of IT can enter the IT job market through the above tracks, or additional options:

- Job-seekers with strong analytical skills and experience, especially within the finance and marketing industries, can learn **business intelligence tools** to open opportunities into BI Analyst roles
- For individuals with **client facing** experience and/or **sales** skills, entry to the IT market through IT Recruiter and Business-to-Business Sales positions build upon transferable soft skills and require knowledge of, rather than technical experience with, IT products and standards

Clients with prior IT experience can enter the market through any of the above tracks, or through adding skills and credentials necessary for upward or lateral movement through the market:

- **Programmer** clients can expand opportunity through development of advanced database skills to tap into database roles highly concentrated in the Chicago area
- **Network and systems support** clients can target security certifications to enter the rapidly growing and high paying information security market
- Web design professionals facing limited demand in the Chicago area can add web development skills and roughly triple the job openings available

Definitions and Iconography

About the Data

All job postings and data reflect Cook County, DuPage County, Kane County, Lake County, McHenry County, Will County and Winnebago County, Chicago area, IL, from 2014.

- Demand (Total postings) reflect the number of jobs posted in Cook County, DuPage County, Kane County, Lake County, McHenry County, Will County and Winnebago County, Chicago area, IL, from 2014.
- Location Quotients (LQ) calculate the ratio of postings to employment in the above 7 counties compared to the national ratio as a benchmark to reflect the concentration of job openings in the Chicago area on a per capita basis.
- Certifications reflect commonly requested credentials for IT occupations or career advancement as per Burning Glass' database of online job postings. Listed certificates are intended to be exhaustive and illustrate the various means of skill development. Not all certificates listed are necessary for job placement.
- Skills are used to show the many areas of knowledge requested by employers and the functions commonly performed in these IT occupations. Like certifications, skills are intended to be exhaustive and not all job postings call for every skill listed in the occupations profiles.
- **Bachelor's Attainment** indicates the percentage of postings that call for a bachelor's degree or higher.
- Entry Level Data indicates the percentage of postings that call for less than or equal to two year work experience.
- Mean Hourly Wage is calculated by taking the average advertised salary as posted in Burning Glass' database of online job postings and dividing according to an average work schedule of 40 hours a week for 52 week per year.

Career Placement Navigation

Opportunities for job placement and career training in Chicago's IT landscape can be identified in this analysis based on **level** of prior experience in the IT industry or existing IT skills sets and domain knowledge.

Career Placement via Experience Requirements:

For clients in search of IT opportunities based on prior experience in the IT field, Burning Glass has organized demand in the Chicago area according to barriers to entry and overall demand.

For a breakdown of IT occupations by barrier to entry, **click below:**

- Low barrier to entry occupations require no prior experience in an IT job.
- Moderate barrier to entry occupations require some prior IT experience and on occasion IT certification.
- Experienced IT professionals occupations have significant education requirements and demand extensive IT experience.

Career Placement via IT Career Ladders:

Clients also may have specific IT roles, career tracks or skill sets of interest. Burning Glass has organized IT demand based on common career pathways and shared core IT skills and functions.

For a breakdown of IT occupations by career ladder, **click below** or see **Career Ladder Mapping** on slide 13:

- Network, Systems and Cyber Security
- Web Design and Development
- Software and Application Development
- Data Mining and Database Design
- Computer Sales and IT Recruitment

Chicago IT Market Overview

Demand for IT Roles in the Chicago Area

Opportunities in IT:

Leveraging the IT Market Overview

The tables within this section provide demand, education, and experience requirements for IT occupations based on barrier to entry. These tables should be used to explore opportunities in the Chicago IT market that correspond with job-seekers' corresponding experience in the IT field*.

Low Barrier to Entry: These occupations require minimal prior experience in IT, and are strong entry points into the IT labor market. Career counselors should target these options for clients early in their career, or aiming for career transitions.

Moderate Barrier to Entry: These occupations require prior experience in IT and likely call for a Bachelor's degree. Barriers to entry are centered on education or advanced IT skills and certifications. Career counselors should pay particular attention to the skills and certification requirements associated with these roles.

High Barrier to Entry: These occupations are considered professional IT roles and require extensive IT backgrounds, leveraging skill sets established in prior IT experience. Career counselors should use this data to identify the skills and certifications necessary for career transitions and advancement.

^{*}Each occupation serves as a clickable link to detailed occupation profiles and career ladders for further exploration

Low Barrier to Entry Occupations

- Help Desk roles are the largest IT opportunity open to sub-BA job seekers and those without prior IT experience, comprising almost 50% of all low barrier demand.
- Comcast, Capital One and Deloitte had the most demand for help desk roles over the course of 2014.

Occupation	Chicago Postings	% ВА	% Entry Level	LQ
Help Desk/Entry-Level Computer Support	5,041	41%	47%	1.24
Computer/IT Sales	2,943	17%	85%	1.25
Satellite / Broadband Technician*	1,475	0%	44%	1.00
Cable Technician / Installer*	134	0%	58%	0.70
Computer Operator*	82	16%	62%	0.90

^{*}Occupations not considered target IT roles for job placement and are therefore not included in the Occupation Profile and Career Ladder section

Moderate Barrier to Entry Occupations

- Junior and mid-level software developers have the strongest demand in the Chicago area of all moderate barrier IT occupations.
- These developer roles also help build proficiencies in programming languages essential to further career progression and mobility between various IT career paths.
- Accenture, Capital One and Sears were the largest employers of junior and mid-level software developers as well as moderate barrier IT roles overall in 2014.

Occupation	Chicago Postings	% BA	% Entry Level	LQ
Junior/Mid-Level Software Developer/Engineer	13,654	91%	27%	1.55
Business Intelligence Analyst	4,198	97%	7%	1.90
Jr/Mid-Level Software QA Tester/Engineer	3,029	90%	42%	1.39
B2B IT Sales	1,923	89%	5%	1.32
Data/Data Mining Analyst	1,840	93%	11%	1.32
Advanced Computer Support	1,708	79%	33%	1.39
Junior/Mid-Level Web Developer	1,643	90%	16%	1.7
Mobile Application Developer	1,440	93%	<5%	1.57
IT Recruiter	535	84%	5%	1.70
Network/Systems Support	513	62%	32%	1.47
Webmaster/Administrator	390	95%	8%	1.03
Help Desk Manager	268	82%	9%	1.53
Junior/Mid-Level Web Designer	153	99%	12%	1.37

IT Professional Occupations

- Senior software developer / engineers are highly demanded in the Chicago area, making up roughly 30% of all professional IT demand.
- There is also a pronounced demand for network, network security and database roles in the Chicago area, offering strong career pathways to well paying and secure IT occupations.

Occupation	Chicago Postings	% BA	% Entry Level	LQ
Senior Software Developer/Engineer	13,093	96%	<5%	1.57
Systems Analyst	6,727	94%	9%	1.64
Network/Systems Engineer/Architect	4,803	82%	5%	1.79
Network/Systems Administrator	4,644	78%	20%	1.12
Database Administrator	4,436	85%	10%	1.47
Business Intelligence Architect/Engineer	2,637	97%	<5%	1.64
Cyber/Information Security Analyst/Specialist	1,513	84%	8%	1.4
Senior Software QA Tester/Engineer	1,363	93%	<5%	1.15
Data Architect	1,321	95%	6%	1.69
Data Warehousing Specialist	1,212	93%	<5%	1.76
UI/UX Designer	1,160	96%	<5%	1.4
Cyber/Information Security Engineer/Architect	921	85%	<5%	1.43
Senior Web Developer	609	100%	<5%	1.14
Cyber/Information Security Manager/Director	281	93%	<5%	1.68
Senior Web Designer	131	99%	<5%	1.03

Occupation Profiles and Career Ladders

A Detail on Target IT Occupations and Transitions

Opportunities in IT:

Leveraging Career Ladders

The career ladders within this document provide demand, skill, and certification requirements for positions based on an area of IT expertise. These ladders include a mixture of low-, moderate-, and high barrier to entry occupations. The transition slides show common pathways within and across domain areas.

Network, Systems and Cyber Security

- · Career advancement heavily dependent on IT certifications
- Cyber security roles are projected to grow 30% over the next 10 years

Web Design and Development

- · Web development is in higher demand and higher paying than web design roles
- Employers increasingly demand a hybrid set of development and design skills
- Development roles more likely to request Bachelor's degrees

Software and Application Development

- Software development stretches across a variety of programming languages such as C++ and PHP
- Core set of programming skills are transferable across a variety of IT occupations and domains
- Experience in development is valued much more than certification

Data Mining and Database Design

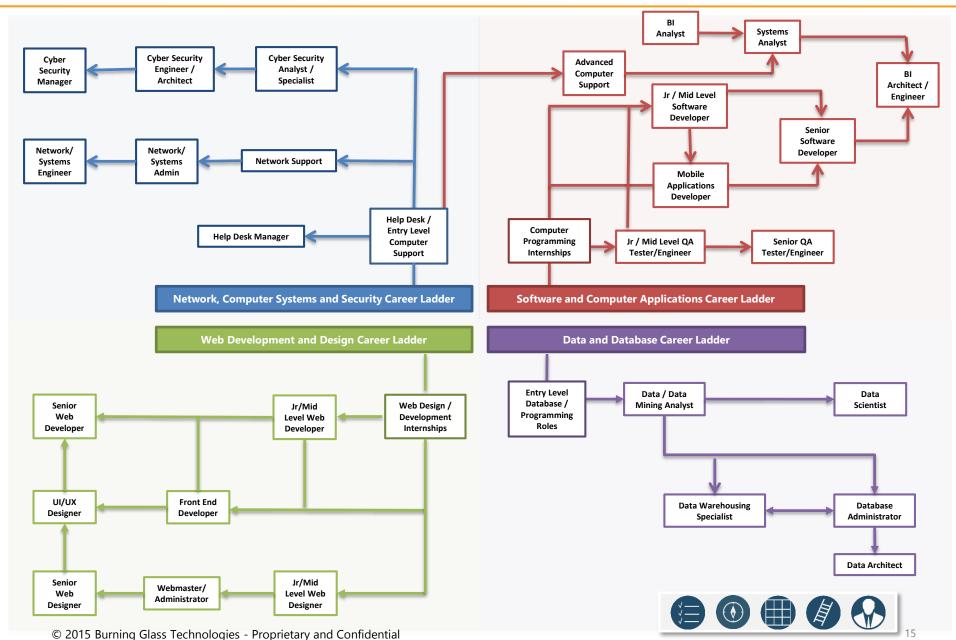

- Analytics jobs available for early career professionals with Bachelor's degree and working knowledge of SQL
- Growing demand amidst the Big Data phenomenon in various industries including Finance and Health Care

• Sales and IT Recruitment

- Strong opportunity for new IT workers to gain IT experience and build a working knowledge of the IT landscape
- B2B sales offer a strong career transition opportunity for long term unemployed with sales and customer service skills

Career Ladder Mapping:

Common Transitions Between IT Career Ladders

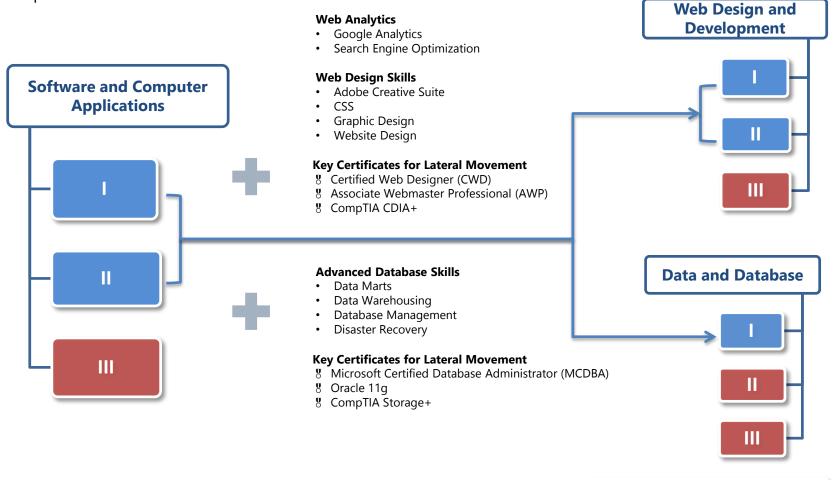

Transitioning to new IT career ladders is a very effective way of leveraging existing skill sets, entering new IT domains and overcoming long term unemployment. The following section serves to illustrate common transitions between IT careers and the necessary skill development to make these transitions possible.

Software and Computer Applications

Career Ladder Transitions

Occupations within the software and computer applications career ladder offer the strongest opportunity for lateral movement towards other IT career ladders. The skill sets for these roles are heavily centered on programming skills and back end application development, which offer a strong foundation to build advanced database proficiencies upon in efforts to migrate to the data and database career ladder, or alternatively to learn front end web design skills to transition to the less demanded web design and development career ladder.

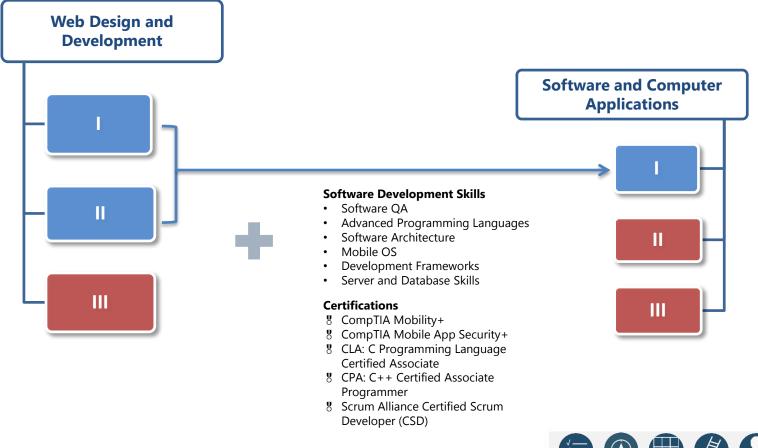

Web Design and Development

Career Ladder Transitions

The key to transitioning from web design and development into the software developer career ladder rests on improving programming language skill sets and gaining a familiarity with back end development and software architecture. Roles in the web design and development ladder primarily work on the front end (e.g. website design and content management) or work mainly in developing web applications on top of existing frameworks as opposed to building software from the ground up. While web applications are becoming increasingly complex and blurring the line between web and software development, an extensive proficiency in the various programming languages and the servers / clients associated with software development is crucial.

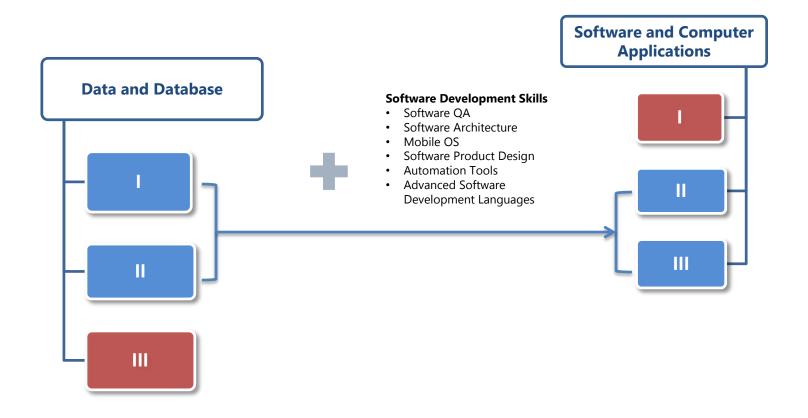

Data and Database Career Ladder Transitions

Occupations that fall under the data and database career ladder have already created a strong foundation of programming tools, server and database knowledge to make the transition to upper levels of the software development career ladder. While these roles should advance their programming language skills outside of the core used in database occupations, the most important addition for this transition is knowledge of software architecture, testing and debugging.

Career Ladder: Network, Systems & Cybersecurity

Notes for Career Counselors on Help Desk:

- Help desk roles require a strong customer service orientation.
- Help desk manager positions rely more heavily on management skills than advanced IT skills.

Notes for Career Counselors on Network and Systems Roles:

- These jobs require at least a Bachelor's degree.
- Obtaining network and systems certifications is critical at these upward IT roles, with increasing demand for information security credentials.
- Network / Systems Administrators and Network Systems Engineer / Architects are two of the most demanded occupations in the Chicago area.

Notes for Career Counselors on Cyber Security:

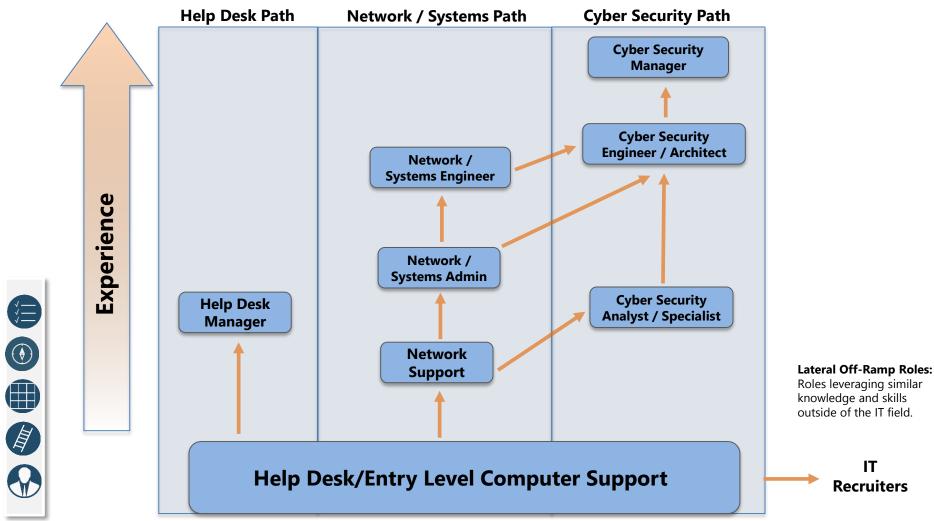

- Taken together, there were over 2,500 Cyber Security job postings in 2014. These roles offer significant opportunity for advancement and are high paying jobs.
- Due to the concentration of demand in industries dealing with sensitive data (i.e. health care and finance), these roles have significant security certifications requirements and are often contracted audit roles.
- To successfully transition into cyber security roles, information security skill sets must be combined with advanced network knowledge.

Network, Computer Systems and Security Career Ladder

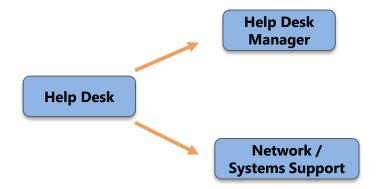

Help Desk roles constitute over half of the demand for entry-level middle-skill IT workers and is an important stepping stone into the IT workforce. The chart below shows the next steps and opportunities to advance to higher-paying, higher-skill roles in network / systems support and cyber security.

Career Ladder: Network, Systems & Cyber Security

Help Desk Pathway

Help Desk/Entry-Level Computer Support

Provides front-line support to personal computer users and addresses basic telecommunications and networking issues.

By far the largest middle-skill IT role, Help Desk roles provide an important entry point into the IT workforce and can serve as a stepping stone to more advanced technical roles. It requires a stronger customer service orientation than most other IT roles. Common job titles include: help desk support / specialist, technical support representative / specialist, and desktop support specialist.

Career Ladder: Web Development and Design

Web development and design is a large set of high-skill IT jobs. Designers are encouraged to add development skills to increase employment options as employers increasingly demand a mix of both skill sets.

Notes for Career Counselors:

- These occupations all require a Bachelor's degree, and **few are entry level** positions.
- Internships are a strong pathway into these occupations. See Intern employers in the appendix.
- A hybrid set of design and development skills are increasingly in demand by employers.
- Advancement in design roles reliant on design portfolio and experience.
- Web developers are in much higher demand than designers web designers should add development skills.

Career Ladder: Data Mining and Database Design

Data Mining and Database Design are a large set of occupations, with more than 6,000 postings in 2014. These high demand, high paying jobs are good transition opportunities for experienced programmers.

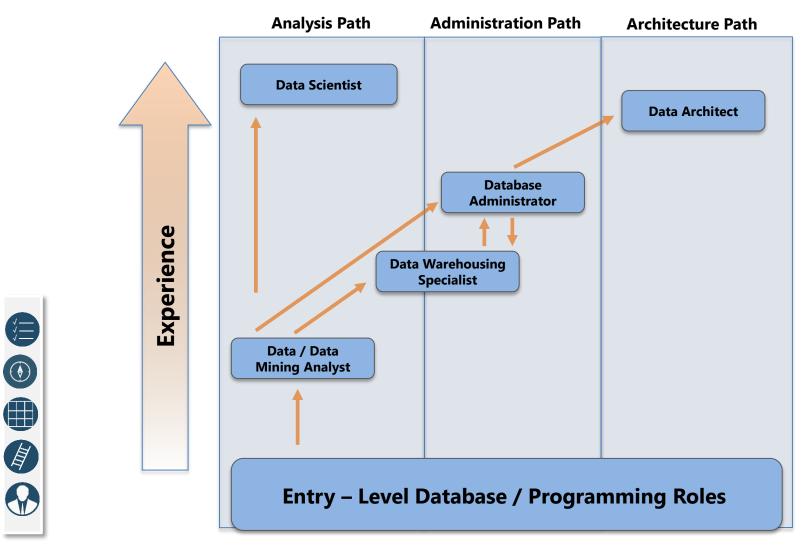

Notes for Career Counselors:

- These jobs all require a Bachelor's degree and thorough understanding of statistical / modeling tools.
- Data Analyst jobs typically perform business intelligence functions, and rely on tools such as SQL.
- Data Architects create the databases, requiring understanding of related business operations.
- **Data Warehousing** roles are very specialized, combining information from multiple databases to improve analytics.
- Many require a business foundation for the application of database functions to enterprise operations.
- Certifications provide pathway to learn advanced database and SQL skills.

Career Ladder: Software QA Testing and Development

Software testing and development opportunities are in lower demand than other high-skill IT occupations.

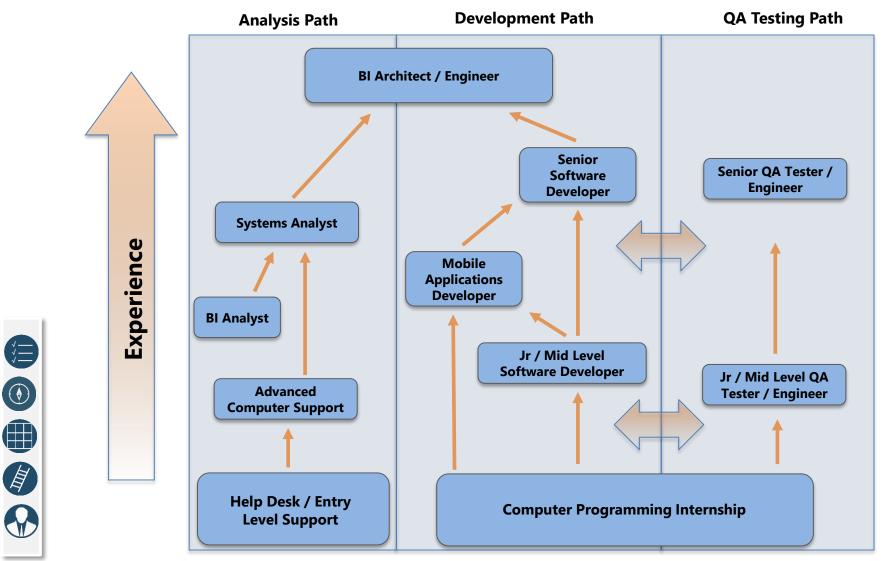

Notes for Career Counselors:

- Advancement is heavily reliant on skill development, knowledge of programming languages, and experience. Formal certifications are useful for career transitions, such as to database roles.
- BI is a strong gateway into high paying IT roles by building upon existing analytical experience, specifically in the finance or marketing fields.

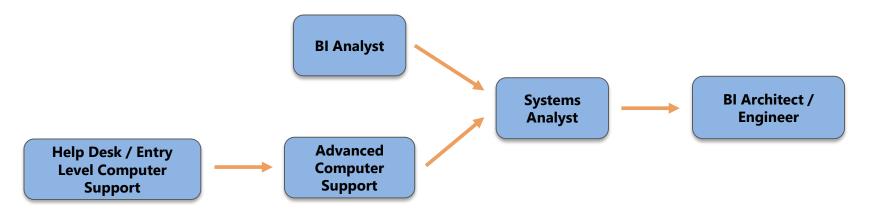

Software and Computer Applications Career Ladder

Career Ladder: Software and Computer Applications

Analysis Pathway

Help Desk/Entry-Level Computer Support

Provides front-line support to personal computer users and addresses basic telecommunications and networking issues.

By far the largest middle-skill IT role, Help Desk roles provide an important entry point into the IT workforce and can serve as a stepping stone to more advanced technical roles. It requires a stronger customer service orientation than most other IT roles. Common job titles include: help desk support / specialist, technical support representative / specialist, and desktop support specialist.

Occupation Profiles: IT Sales and Recruiting

Sales positions offer an entry into the IT field. These positions require a knowledge of IT more than technical skills.

- **Computer sales** positions provide opportunity for workers with limited professional or IT experience. These jobs offer baseline IT training, and will require simultaneous training to transition into help desk or development roles.
- Business-to-Business IT Sales positions require understanding of IT products and build off of customer service, sales and client facing experience. These roles are in demand, and well-paying. They are ideal for experienced professionals transitioning to the IT field.
- IT Recruiter roles are also a strong stepping stone for individuals without prior IT experience, but an existing set of transferable soft skills while gaining knowledge of IT products and services.

■ Computer/IT Sales

Understand sales goals and customers' needs, deliver customer experience from sales to installation and after-sales services.

Computer/Technical Product Sales person are the ones who possess the knowledge of latest technology and devices. They also have basic computer skills as they are usually required to process customer transaction systems and help customers set up their devices, which prepare them for entry level IT roles. Common job titles include: sales consultant, retail sales associate, store associate, sales representative, customer service representative.

Appendix

Methodology

All jobs data in this report are drawn from Burning Glass's database of online job postings, which includes nearly 100 million worldwide postings collected since 2007. Each day, Burning Glass visits over 40,000 online jobs sites to collect postings. Using advanced text analytics, over 70 data fields are extracted from each posting including job title, occupation, employer, industry, required skills and credentials and salary. Postings are then deduplicated and placed in a database for further analysis.

IT occupation postings were identified and split into the categories included by finding and flagging the titles, skills, credentials, keywords, and employers that typify postings in each IT category.

About the Data

All job postings and data reflect Cook County, DuPage County, Kane County, Lake County, McHenry County, Will County and Winnebago County, Chicago area, IL, from 2014.

- **Demand (Total postings)** reflect the number of jobs posted in Cook County, DuPage County, Kane County, Lake County, McHenry County, Will County and Winnebago County, Chicago area, IL, from 2014. Source: Burning Glass Technologies.
- Location Quotients (LQ) calculate the ratio of postings to employment in the above 7 counties compared to the national ratio as a benchmark to reflect the concentration of job openings in this area.
- Bachelor's Attainment indicates the percentage of postings that call for a bachelor's degree or higher.
- Entry Level Data indicates the percentage of postings that call for less or equal to three year work experience.

About Burning Glass

Burning Glass's tools and data are playing a growing role in informing the global conversation on education and the workforce by providing researchers, policy makers, educators, and employers with detailed real-time awareness into skill gaps and labor market demand. Burning Glass's job seeker applications power several government workforce systems and have been shown to have substantive impact on reemployment outcomes and on labor market literacy.

Burning Glass is proud to serve a client base that spans six continents, including education institutions, government workforce agencies, academic research centers, global recruitment and staffing agencies, major employers, and leading job boards.
